

Patent-pending modular LED lighting system

A patent-pending modular LED lighting system based on a limited family of versatile LED modules, enabling multiple luminaire configurations for residential, office and commercial spaces - from decorative luminaires to larger modular lighting installations.

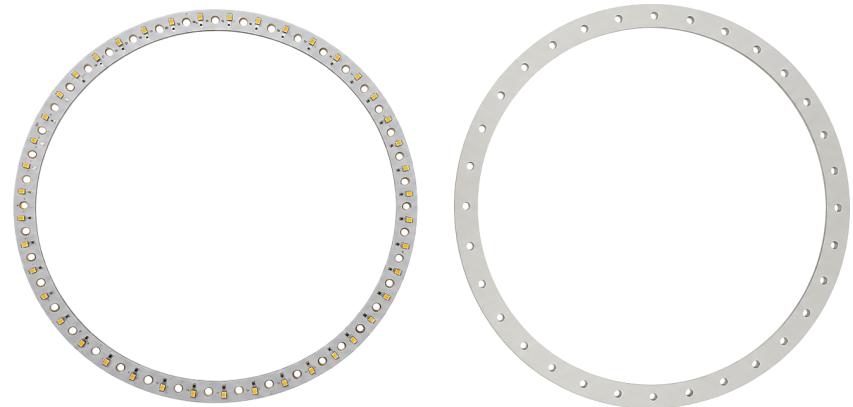

Two LED module types

The system is based on two LED module types: a linear module and a ring-shaped module. Luminaire designs can be built from linear modules, ring-shaped modules, or a combination of both.

Linear module

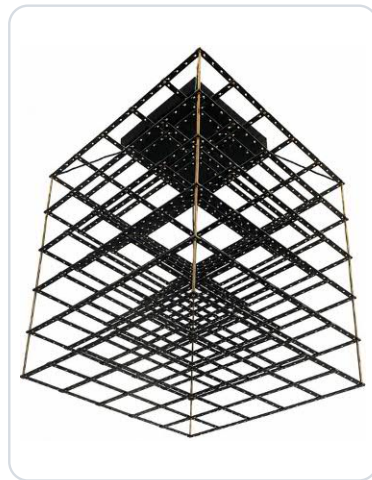

Ring-shaped module

One modular system - four luminaire categories

The value is not limited to a single luminaire shape. The value is a repeatable construction logic: a limited set of LED module types can generate wall, ceiling, table and floor luminaires while maintaining a coherent visual and technical language.

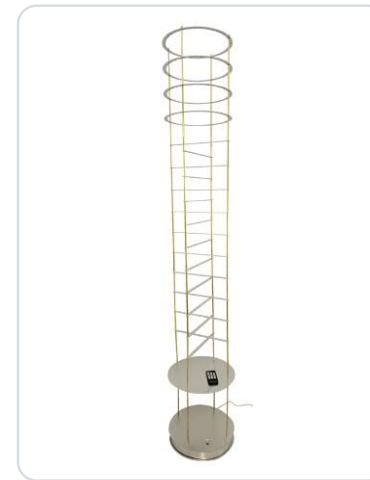

Wall luminaires

Ceiling luminaires

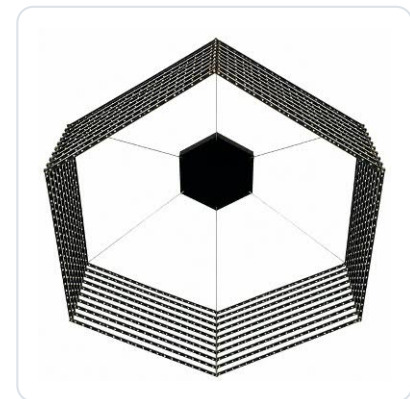

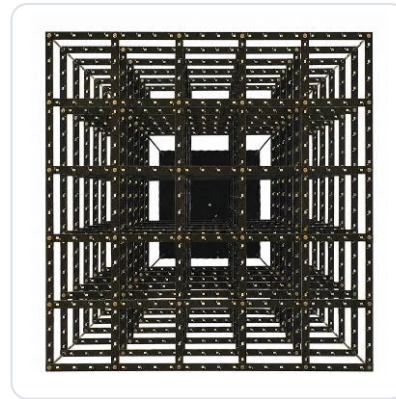

Table luminaires

Floor luminaires

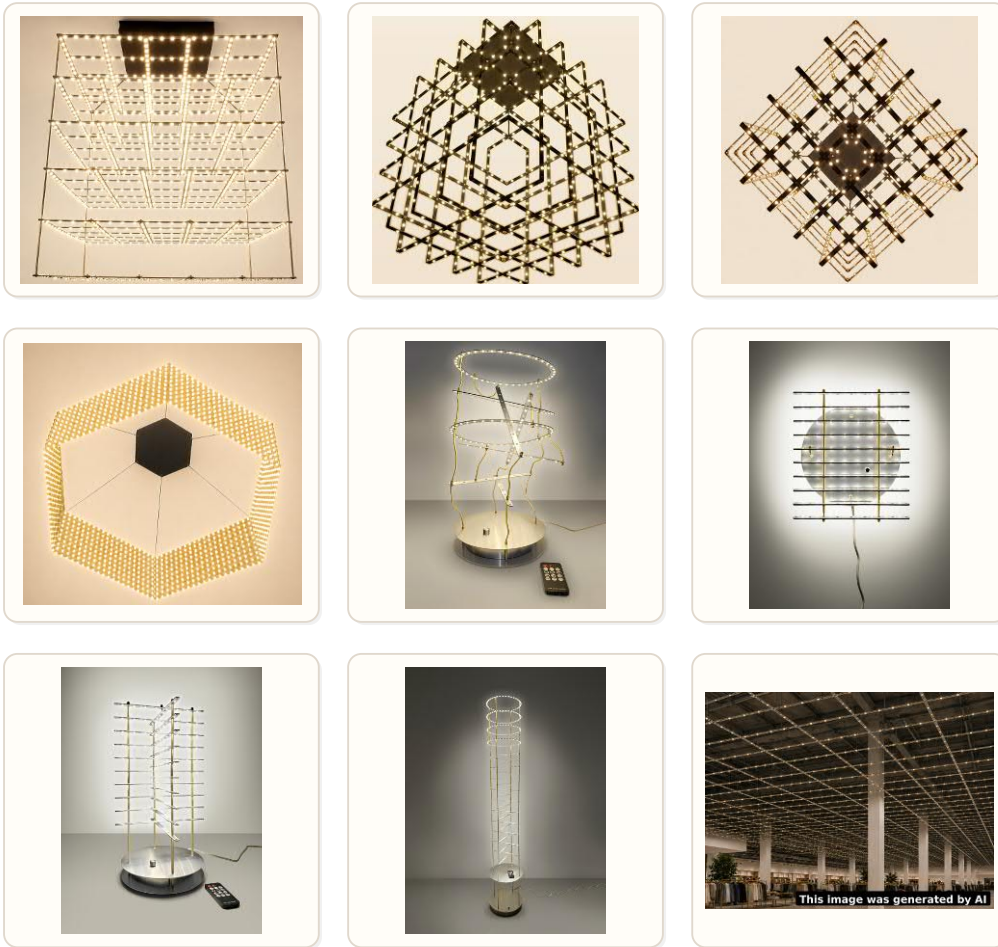

Luminaire Design Variations

Different Forms, One Modular System.

Illuminated Forms

Light, Structure and Atmosphere.

Partnership Opportunities

Licensing, Manufacturing and Commercial Collaboration.

Licensing

Rights to use the modular LED lighting system in selected applications or territories.

Manufacturing Partnership

Production, assembly or adaptation of the system for an existing manufacturing base.

Product Integration

Integration of the modular LED system into existing luminaire lines, OEM or private-label products.

Commercial Distribution

Regional representation, project-based sales and market-entry support.

Open to exclusive or non-exclusive partnerships depending on application, territory and scope.

A modular LED system suited to different partnership models.
